Oleg Kuznetsov

Chief Mechanical Engineer of Vyksa Steel Works, JSC

With DYNAMICS SPC we have known each other since 2004. Our collaboration started to take place in a wheel-rolling shop where we mounted a stationary diagnostic system to a wheel-rolling mill. After that project, the mill reached stratospheric levels and overfulfilled all plans for production. A leading part in that success was played by the diagnostics which allowed us to avoid any serious accidents in such parts of the wheel-rolling mill, as shafts, conductors and drives. Today we are looking forward to further cooperation, because prognostic services today are the most crucial element of machinery reliability.
