Yuri Lamygo

Deputy Director General on Mechanical Readiness of LUKOIL-Ukhtaneftepererabotka, JSC

We started to cooperate with DYNAMICS SPC in 2007 when the first vibration monitoring system COMPACS was installed at the «Visbreaking» plant. After one year of the system's operation it was also installed at the «Isomerization» plant. Thereafter, we decided to mount the system to all pump and compressor units. Our company has switched from a preventive maintenance approach to safe and resource-saving operation and maintenance which is based on the actual condition of machinery in real-time. The implemented systems have allowed us to increase the uptime of machinery, and to decrease our maintenance costs.
