## Andrey Dvornikov

Deputy Chief Mechanical Engineer  
of Angarsk Petrochemical Company, JSC

We began by implementing the system in the units related to the production of primary plants. So far, the COMPACS system has proved to be a highly reliable product. As the younger generation come– it is very difficult for them to see what the causes of machinery faults are. The COMPACS system helps them a lot.

It helps them to understand the causes and to analyze what causes a machinery shutdown. Young specialists are learning from this system better than from the experience of the older ones.

I wish DYNAMICS SPC a dynamic development! And to develop not only at the final product – a pump – but to implement systems at the plants where pumps are produced.
