## Alexander Pavlov

Technical Director of Volgogradneftemash, JSC

Volgogradneftemash is one of the biggest manufacturers of pump units. There has been an urgent problem of pump quality since 2009. To increase pump quality it was decided to equip the plant with a diagnostic bench system. Now it helps us to produce better pumps and prove their quality on paper. To execute this task we've chosen DYNAMICS SPC. Our mutual cooperation for 2 years resulted in our plant having one high-quality bench table which diagnoses every pump after it has been manufactured.
