President of Omsknefteorgsintez

Thanks to DYNAMICS SPC we have moved from unpredictable destruction, accidents and emergency repairs of our machinery to a much more predictable system, to the decommissioning system that allows us to prevent numerous accidents. Thanks to that, in the last few years we have had none. Another matter related to the implementation of the COMPACS system is that now we got a system of an absolute personnel control, so we can monitor the pump compressor equipment not only in working hours, but anytime. Now we can repair our machinery without any schedules, that used to be put together quite randomly, but judging from the machinery's actual needs. Therefore, we have managed to save significant money - the exact amount, due to current inflation, is hard to specify, unfortunately. But we believe, that such increases in profitability are proportionate to not only the expenses on the system implementation, but, literally, exceed the expenses 10-fold.
