## Oleg Lvov

Deputy Director General of  
LUKOIL-Volgogradneftepererabotka, LLC

In 1996 we began cooperation on our first projects and then, within the next 5 years, we implemented 11 systems at the main plants of the refinery. Currently, there are 18 systems in all our main facilities. The implementation of the systems has allowed us to carry out vibration monitoring of the main vibrating machinery of the pump unit. As a result, the amount of repairs was reduced considerably.
